

**Bangor Area Comprehensive Transportation System (BACTS)
REQUEST FOR CLARIFICATION
Regional Culvert Inventory and Capacity Analysis**

Does BACTS currently have an ArcGIS Online organizational account with a Creator license available for this project?

Yes, we do.

Has the original culvert geodatabase already been published to ArcGIS Online, or is it currently only stored locally?

It is published to ArcGIS Online.

How has BACTS provided access to municipalities that lack their own ArcGIS Online accounts? Does BACTS want municipalities to be able to edit and update culvert information, or should the system be view-only for municipal users?

BACTS will provide access to municipalities using an ESRI experience viewer application that is view only, and may review offering further access to GIS data if requested by the municipality.

Should municipalities be able to view culvert information from neighboring communities, or should each municipality only have access to its own data?

The experience viewer will be available to all municipalities with no community specific filters.

Who is expected to maintain and update the data over time—BACTS as the system administrator, or each municipality?

BACTS will maintain and update the data.

Is this project intended to serve as a one-time inventory and prioritization of culverts, or is the goal to create a long-term asset management system that evolves as infrastructure conditions change?

The goal is to create a long-term asset management system.
